Overview

The CurrencyAPI.net extension for Magento 2 provides real-time currency exchange rates from [CurrencyAPI.net](#). This extension automatically updates your store's currency rates, ensuring accurate pricing for international customers. A great alternative to Fixer.io.

Key Features

- **Real-time Exchange Rates:** Get up-to-date currency rates from CurrencyAPI.net
- **152 Currencies:** Support for all major world currencies
- **Automatic Updates:** Currency rates update automatically via Magento's cron
- **Easy Configuration:** Simple setup through Magento Admin
- **Secure:** API key stored securely in Magento configuration
- **Error Handling:** Robust error handling with retry logic

Requirements

- Magento 2.4.0 or higher
 - PHP 8.1 or higher
 - Valid CurrencyAPI.net API key
-

Installation

Installing via Composer from Magento Marketplace

1. Get your extension information:

- Log in to [Commerce Marketplace](#) with your account
- Click **Your name > My Profile**
- Click **My Purchases**
- Find the extension and note the component name and version

2. Ensure your `composer.json` includes the Magento repository:

```
"repositories": [  
    {  
        "type": "composer",  
        "url": "https://repo.magento.com/"  
    }  
]
```

3. Install the extension with the specific version:

```
composer require houseofapis/magento2-currencyapi-importer:1.0.0
```

4. **Enter your authentication keys** when prompted (your public key is your username; your private key is your password)

Post-Installation Steps

After installing using any method above, run these commands:

```
# Enable the module  
php bin/magento module:enable HouseOfApis_CurrencyApi  
  
# Update the database schema  
php bin/magento setup:upgrade  
  
# Compile dependency injection  
php bin/magento setup:di:compile  
  
# Verify the module is enabled
```

```
php bin/magento module:status HouseOfApis_CurrencyApi
```

```
# Clean the cache
```

```
php bin/magento cache:clean
```

Note: If you encounter any issues loading the storefront, run `php bin/magento cache:flush` to completely flush all caches.

API Key

You need an API key to use this extension.

Get your API key by creating a free account at [CurrencyAPI.net](https://currencyapi.net):

- Free plan: USD base currency only
- Paid plans: Required to change the base currency (for example to EUR, GBP, etc.)

Configuration

The screenshot shows the Magento 2 Configuration interface. On the left is a sidebar with navigation links: DASHBOARD, SALES, CATALOG, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The main area is titled 'Configuration' and shows the 'Scope' as 'Default Config'. A 'Save Config' button is in the top right. The left sidebar of the configuration panel lists categories: GENERAL, General, Web, Currency Setup (highlighted), Store Email Addresses, Contacts, Reports, and Content Management. The right panel shows 'Currency Options' with expandable sections for 'Fixer.io (legacy)', 'Fixer Api (APILayer)', and 'CurrencyApi.net'. The 'CurrencyApi.net' section contains an 'API Key' field (labeled [global]) with a red eye icon and a placeholder text 'Enter your API key from CurrencyApi.net.', and a 'Connection Timeout in Seconds' field (labeled [global]) with the value '15'. Below this is the 'Currency Converter API' section.

1. Go to **Stores > Configuration > General > Currency Setup**
2. Select **CurrencyApi.net**
3. Enter your API key from [CurrencyAPI.net](https://currencyapi.net)
4. Configure connection timeout if needed
5. Save configuration

1. The new rates will now be imported
2. Click Save Currency Rates to apply

Importing Currency Rates Automatically (via Cron)

To tell Magento to fetch currency rates from CurrencyApi.net automatically, we need to select CurrencyApi.net as the import service

1. Go to **Go to Stores → Configuration → General → Currency Setup**
2. Head to the Scheduled Import Settings section
3. Ensure Enabled is set to Yes
4. Under the Service dropdown, select "CurrencyApi.net"
5. Select the time and frequency you want to update the rates
6. Click Save Config

Currency List

We supply up to 152 fiat currencies, cryptos and precious metals.

By default, Magento does not support cryptos and precious metals and there maybe some old currencies that are available on Magento but not available from our API.

For a full list of the currencies we supply, head over to [our currency list](#) page.

Usage

Automatic Rate Updates

The extension automatically updates currency rates via Magento's cron system:

1. **Ensure cron is running** on your server
2. **Rates update** every hour by default
3. **Monitor** the **Stores > Currency Rates** page for updates

Base Currency Configuration

- **Free Plan:** USD base currency only
 - **Paid Plans:** Any supported currency as base
 - **Multiple Bases:** Configure multiple base currencies for different store views
-

Troubleshooting

Common Issues

"No API Key was specified" Error

Problem: Extension shows error about missing API key.

Solution:

1. Go to **Stores > Configuration > General > Currency Setup**
2. Select "CurrencyApi.net" as import service
3. Enter your API key and save

Currency Rates Not Updating

Problem: Rates are not updating automatically.

Solutions:

1. **Check cron jobs:** Ensure Magento cron is running
2. **Verify API key:** Make sure your API key is valid
3. **Check connectivity:** Ensure your server can reach currencyapi.net
4. **Review logs:** Check `var/log/system.log` for errors

"API key is not valid" Error

Problem: Extension reports invalid API key.

Solutions:

1. **Verify key:** Double-check your API key from CurrencyAPI.net dashboard
2. **Check subscription:** Ensure your account is active
3. **Regenerate key:** Try generating a new API key

Import Timeout Errors

Problem: Currency import times out.

Solutions:

1. **Increase timeout:** Set higher timeout value in configuration
2. **Check server:** Ensure your server has stable internet connection
3. **Contact support:** If issues persist, contact CurrencyAPI.net support

Debugging

Enable Debug Logging

1. **Go to Stores > Configuration > Advanced > Developer**
2. **Set** "Log to File" to "Yes"
3. **Check** `var/log/debug.log` for detailed information

Check System Logs

1. **Review** `var/log/system.log` for currency-related errors
 2. **Look for** entries containing "CurrencyApi" or "currency"
